CC (EDN)/endothelin converting enzyme (ECE)/receptors of EDN and ECE (EDNR)

CC signaling system which is associated with a cardiovascular disease. (I),

CC the gene encoding EDN, ECE or EDNR (II) or a vector (III) expressing (I)

CC or (II) is useful for producing cells capable of expressing a molecular

CC (II), (III), the EDN, ECE or EDNR polypeptide, or a cell expressing a

CC molecular variant gene comprising (I) is useful for identifying and

CC molecular variant of a polypeptide of modulating the activity of a

CC molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system

CC or its gene product, or for identifying and obtaining an inhibitor of the

CC signaling system or its gene product. The isolated proteins and

CC polymucleotides encoding them are useful for preparation of a

CC coronary heart disease, hypertension, atherosclarosis, or related to

CC abnormal angiogenesis or fatty acid metabolism e.g. diabetes and familial

CC hypercholesterolaemia. The gene or a polymucleotide fragment of the

CC comprising polymucleotides, spense, vectors, polypeptides, antibodies or

CC comprising polymucleotides genee, vectors, polypeptides, antibodies or

CC comprising polymucleotides and in creation of a solid support

CC comprising polymucleotides and in creation of a solid support

CC comprising polymucleotides or fatty acid metabolism e.g. diabetes and familial

CC polymucleotides, spense, vectors, polypeptides, antibodies or

CC comprising polymucleotides or fatty acid metabolism e.g. diabetes and familial

CC polymucleotides encoding spense or a polymucleotide fragment of the

CC comprising polymucleotides or fatty acid metabolism e.g. diabetes and familial

CC polymucleotides encoding spense, vectors, polypeptides, antibodies or

CC comprising polymucleotides or fatty acid metabolism in polypeptides, antibodies or

CC constinct and the invention. This sequence represents a PCR primer used

CC and the collection of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel polynucleotide of the endothelin/endothelin converting enzyme/receptors of endothelin and endothelin converting enzyme signaling system associated with cardiovascular disease, useful for treating the disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes a polynucleotide (I) of the endothelin (EDN)/endothelin converting enzyme (ECE)/receptors of EDN and ECE (EDNR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Endothelin; EDN; endothelin converting enzyme; ECE; endothelin receptor; EDNR; signaling system; cardiovascular disease; coronary heart disease; hypertension; atherosclerosis; angiogenesis; fatty acid metabolism; diabetes; familial hypercholesterolaemia; forensic marker; transgenic animal; solid support; cardiovascular regulator; SNP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 6;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Brinkmann U,

The invention relates to a nucleic acid comprising single nucleotide polymorphisms (SNPs) associated with diseases. The nucleic acids comprising the SNPs and probes and primers for detecting them may be used in assays for the diagnosis of diseases associated with SNPs (such as sickle cell anaemia, agammaglobulinaemia, diabetes insipidus, Lesch-Nyhan syndrome, muscular dystrophy, Wiskott-Aldrich syndrome, Fabry's disease, familial hypercholesterolaemia, polycystic kidney disease, hereditary spherocytosis, Von Willebrand's disease, theorems esterosis, hereditary haemorrhagic telangiectasia, familial colonic polyposis, Ehlers-Danlos syndrome, osteogenesis imperfecta, and acute intermittent porphyria, symptoms of, or susceptibility to, multifactorial diseases of which a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; single nucleotide polymorphism; SNP; sickle cell anaemia; agammaglobulinaemia; diabetes insipidus; Lesch-Nyhan syndrome; muscular dystrophy; Wiskott-Aldrich syndrome; Fabry's disease; familial hypercholesterolaemia; polycystic kidney disease; cancer; hereditary spherocytosis; Von Willebrand's disease; tuberous sclerosis; hereditary haemorrhagic telangiectasia; familial colonic polyposis; belers-Danlos syndrome; osteogenesis imperfecta; autoimmune disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                diseases related to the presence of mutations in nucleic acid sequence which encode the enzyme. The present sequence represents the forward TagMan real-time PCR primer used to analyse tissue specificity and quantitate prostasin-like serine protease mRNA expression

ratio of D3 do receptor mRNA individual. Diagnosing neurodegenerative disorder in an individual by evaluating ratio of D3 dopamine receptor mRNA and/or alpha7 nicotinic acetylcho receptor mRNA of test individual, to control gene mRNA of healthy acetylcholine

Example 2; Page 8; 33pp; English.

The invention relates to a method of diagnosing a mental disorder or a neurodegenerative disorder that involves measuring mRNA of D3 dopamine receptor and/or alpha7 nicotinic acetylcholine receptor (alpha7 ACRR), and of a control gene in peripheral blood lymphocytes (PBLs) of an individual and of at least one healthy control individual, calculating the ratio between D3 dopamine receptor mRNA and the control gene mRNA and/or the ratio between alpha7 ACRR mRNA and the control gene mRNA for each individual, evaluating the ratios obtained for the tested individual and the healthy control individual. An increase in D3 dopamine receptor mRNA and/or decrease in alpha7 ACRR mRNA in the tested individual in comparison to the control individual indicates that the tested individual individual individual

CC for diagnosting the presence of or a predisposition for a disorder containing fatty acid regulated genes in a subject. A composition CC containing (I) or (II) is useful for treating a disorder involving fatty acid regulated genes, where the disorder is selected from a CC acid regulated genes, where the disorder is selected from a CC golyunsaturated fatty acid (PUPA) disorder, eczema, cardiovascular CC disorders (such as hypertriglyceridaemia, dyslipidaemia, atherosclerosis, CC coronary artery disease, cerebrovascular disease or peripheral vascular CC disease), inflammation (such as sinusitis, asthma, pancreatitis, cardiovascular disease), inflammation (such as sinusitis, asthma, pancreatitis, CC (such as obseity, cachexia or anorexia), psychiatric disorders, cancer, CC (such as obseity, cachexia or anorexia), psychiatric disorders, cancer, CC (cystic fibrosis, pre-menstrual syndrome, diabetes, and diabetic CC complications. (I) or (II) is useful as research agent and materials for CC discovery of treatments and diagnostics for a disease, particularly human CC disease. (II) is useful for constructing nucleotide probes and primers, CC expression of (II), and as a diagnostic tool. This sequence represents a CC primer used to isolate DNA encoding fat regulated genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 1601
ABK13568/c
diagnosis of micro-metastases, autoimmune lesions and renal failure in those y specimens, plasma samples and body fluids. The antibody may be used to modulate enzyme activity in a disease, such as metastasis of malignant cells, tumour anglogenesis, inflammation, chronic obstructive compulmonary disease (COPD), atherosclerosis, neurodegenerative disease (COPD), atherosclerosis plaques of Genstmann-Straussler Syndrome, creutzfeldt-Jakob disease, Scrapie) or infection, particularly viral (COPD), atherosclerosis of decreasing human prostasin-like serine protease activity, in particular for treating or preventing metastatic cancer. The agonists and antagonists of the nucleotide sequence may be useful to treat osteoporosis, Paget's disease and degradation of bone implants of particularly dental implants. Altered levels of human prostasin-like serine protease activity inhibits both smooth muscle cell proliferation and inhibit the progression of restenosis and catherosclerosis. The nucleic acid sequence is also useful in diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                    This invention comprises the cDNA and protein sequences of an isolated prostasin-like serine protease and reagents and methods for regulating the human prostasin-like enzyme activity. Prostasin is a trypsin-like serine protease purified from human seminal fluid. An antibody specific for prostasin-like serine protease is useful for immunodetection and for prostasin-like serine protease is useful for immunodetection and seminal failure in the protease is serine protease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel human prostasin-like serine protease polypeptide and polynucleotide which can be regulated for treating metastasis of malignant cells, inflammation, atherosclerosis, neurodegenerative disease and infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                neurodegenerative disease; prion protein; infection; amyloid plac

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         몽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
       The sequence represents pBANe10 variant sequencing primer 971228. pBANe10 comprises the TAKA/NA2-tpi leader hybrid promoter, the lipase gene from thumicola lanuginosa, the ANG terminator and the full length Aspergillus nidulans pyrG gene. This construct was used in a method of producing a polypeptide, which involves cultivating a fungal host cell in a medium and isolating the polypeptide from the medium. The host cell comprises a first sequence encoding the polypeptide in tandem with a sequence comprising a crippled translational initiator sequence operably linked to a gene encoding a selectable marker in which the 3' end of the crippled translational initiator sequence operably linked to the gene. The crippled translational initiator codon of the initiator codon of the gene. The crippled translational initiator comprises a T at the 3 position and a T at one or more of the -1, -2 and -4 positions, and the copy number of the first nucleic acid sequence is increased by culturing the host cell under conditions that select for multiple copies of the selected from a hormone or its variant, an enzyme, a receptor or its portion, an antibody or its portion, or a reporter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      constructing SVI-based expression/transduction vectors and as antisense oligonucleotides or for construction of antisense SVI vectors. Antisense SVI polynucleotides block expression of SVI proteins and/or SVI:viral replication in SVI infected cells, and thus are useful for treating SVI infections. SVI polypeptides are useful in vaccines for preventing SVI infection and for treating SVI infection. (Updated on 06-AUG-2003 to
                                                                                                                                                                                                                                                                                                                                                                               Producing a polypeptide such as an enzyme, comprises cultivating a fungal host cell containing a sequence encoding the polypeptide in tandem with another sequence comprising a crippled translational initiator sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic

                                                                                                                                            The invention relates to polymorphic nucleic acid sequences encoding the very low density lipoprotein receptor (VLDLI) and methods of analysing a nucleic acid sample for polymorphisms. This method comprises obtaining a nucleic acid sample from one or more individuals, and determining the nucleotide occupying one or more of the polymorphic sites of one or more nucleic acid molecules. The method is useful for predicting the presence, absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or severity of a particular phenotype or disorder (e.g. absence or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 21 BP; 3 A; 3 C; 9
                                                                                               variant nucleic acid molecules encoding VLDLr or wild-type or variant nucleic acid molecules encoding VLDLr or wild-type or variant gene products can be used in the diagnosis and treatment of cardiovascular diseases and other diseases associated with VLDLr.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Polymorphic nucleic acid sequences encoding the very low density lipoprotein receptor, useful for predicting the presence, absence or severity of a particular phenotype or disorder, e.g. cardiovascular disease such as coronary heart disease.

The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thrombosembolism are pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of

The present invention describes a method for detecting the presence polymorphisms associated with inflammatory bowel diseases such as ulcerative colitis and Crohn's disease. The methods can be used to the presence of genetic polymorphisms associated with inflammatory disease and correlating their occurrence with disease states. They used in this way for phenotypic correlations, forensics, paternity testing, medicine and genetic analysis. The present sequence is a polymorphic site described in the exemplification of the invention

Novel virus, designated sentinel virus I, associated with cryptogenic, nonA-G hepatitis, and polynucleotides and polypeptides of virus useful for detecting SVI virus and/or SVI virus infection.

Example <u>ب</u> Page 28; 65pp; English.

PCR primers AAH25543-44 were used to assay for sentinel virus I (SVI). The primers and SVI polynucleotides are useful for detecting SVI virus. Probes and primers derived from SVI polynucleotide sequences are useful for identifying and isolating new variants of SVI. SVI polynucleotides are useful for detecting SVI virus, producing SVI polypeptides,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular disease, renous thrombosembolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification
                                                                                                                                                                                                                       Human; variant thrombospondin 1; variant thrombospondin 4; SNP; polymorphism; vascular disease; coronary artery disease; forensics; myocardial infarction; atherosclerosis; stroke; venous thromboembol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids comprising single nucleotide polymorphisms, useful in applications such as forensics, paternity testing, medicine, genetic analysis and phenotype correlations to diseases such as diabetes and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thromboembolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids comprising single nucleotide polymorphisms, useful applications such as forensics, paternity testing, medicine, gene analysis and phenotype correlations to diseases such as diabetes
                                                                                                                                                                                polymorphism; vascular disease; coronary artery myocardial infarction; atherosclerosis; stroke;
                                                                                                                                                                                                 Human; variant thrombospondin 1; variant thrombospondin 4; SNP; polymorphism; vascular disease; coronary artery disease; forensics;

                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel polypeptides, termed MBSPX and polynucleotides encoding the MBSPX polypeptides. The MBSPX polypeptide, nucleic acid and an MBSPX antibody are useful for treating or preventing a pathology associated with the protein especially in humans. The MBSPX nucleic acid can be used to express MBSPX protein (e.g. via a recombinant expression vector in a host cell in gene they applications), an to detect MBSPX mRNA in a biological sample or a genetic lesion in a MBSPX gene. Disorders associated with insufficient or excessive production of MBSPX protein include cancer, preclampsia, immune system disorders and inflammation, neurological disorders, cardiovascular disorders; and skin and muscle abnormalities. The anti-MBSPX antibodies can be used to detect mand isolate MBSPX proteins and modulate MBSPX activity. Sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     13-OCT-1999;

Novel human polynucleotide sequences and polypeptides encoded by these sequences, the membrane bound designated MBSPX. o R secreted

Example 7; Page 138; 157pp; English.

polynucleotides encoding the MBSPX polypeptides. The MBSPX polypeptide, nucleic acid and an MBSPX antibody are useful for treating or preventing a pathology associated with the protein especially in humans. The MBSPX nucleic acid can be used to express MBSPX protein (e.g. via a recombinant expression vector in a host cell in gene therapy applications), an to detect MBSPX mRNA in a biological sample or a genetic lesion in a MBSPX gene. Disorders associated with insufficient or excessive production of MBSPX protein include cancer, preclampsia, immune system disorders and inflammation, neurological disorders, cardiovascular disorders; and skin and muscle abnormalities. The anti-MBSPX antibodies can be used to detect and isolate MBSPX proteins and modulate MBSPX activity. Sequences AAP83026-033 represent gene specific PCR primers for amplifying the MBSP6 The invention relates to novel polypeptides, termed MBSPX and

The present invention describes an intact, deglycosylated lactoferrin protein or a single domain, deglycosylated lactoferrin polypeptide fragment produced by a process comprising culturing a transformed Aspergillus fungal cell containing a recombinant plasmid. The lactoferrin can be used in a variety of products including human or animal foods, as therapeutic additives to enhance iron transport and delivery, and for the virucidal and bacteriocidal qualities, as additives for eye drops, contact lens and other eye care solutions, topical skin care products, ear drops, mouthwashes, chewing gum and toothpaste. The bactericidal lactoferrin polypeptides are useful as preservatives in the above products, and as therapeutic anti-infection agents. Each protein may also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the subject in exercise training. The present sequence is an apercumprimer used to detect substitutions in IRS-1. Different IRS-1 genotypes have variations in the improvement of cholesterol levels after extensive

The present sequence represents a mutagenic oligonucleoti human lactoferrin, which is used in an example from the present i
                                     The present invention relates to an oligonucleotide array comprising oligonucleotide tags fixed to a solid substrate. The oligonucleotide array is useful for gencyping a nucleic acid sample at one or more loci via single base extension (SBE) reactions. A pair of primers is used to amplify a polymorphic locus in a sample e.g. a single nucleotide polymorphism (SNE). The present sequence is one such polymorphic locus used in the present invention. The amplified nucleic acid product is then used as a template in a SBE reaction with an excension primer. The SBE reaction products are used to form the oligonucleotide array. Note: This sequence includes a SNP represented by the degenerate codon in the
                                                                                                                                                                                                                    Universal array of oligonucleotides tags attached along with locus-specific tagged oligonucleotides using single base extension reactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Oligonucleotide array; genotyping; polymorphic locus; single nucleotic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment.

                                                                                                                                                                Improving cholesterol levels in individuals with hypercholesteremia or diabetes involves identifying genetic markers such as glucose transpor and myostatin gene that positively correlate with cholesterol levels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            substitution in the insulin receptor substrate-1 (IRS-1) gene. DNA was taken from men with diabetes or at risk of developing diabetes. The subjects underwent 9 months of endurance exercise training and their improvement in diabetes status was quantified. A number of gene loci were analysed and certain genotypes and/or alleles were found to positively correlate with greater success in improving diabetes status in diabetic individuals as compared with other alleles and/or genotypes at the same locus. Individuals with an 11 or 12 genotype for a beta-2 adrenergic receptor gene, a 11 genotype for a beta-3 adrenergic receptor gene, a 11 genotype for a paroxisome proliferator activator receptor gamma gene, a 12 genotype for a fatty acid binding protein-2 gene or a 12 genotype for a nightin receptor substrate-1 gene had decreased insulin and glucose
                                                                                                                                                                                                                                                                                                                                                       WPI; 2000-423448/36.

AAZ69579 to AAZ7140 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment. N.B. The SEQ ID Nos 2852, 2913, 2974, 3035, 3096, 3157, 3227, 3297 and 3367, are not accually given a sequence in the Sequence Listing from the research in the calculation of the careacter is the content of the accually given a sequence in the Sequence Listing from the

                                                                                                                                                                                                                                                                                                         AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ7440 represent amplification primers for the biallelic markers. The biallelic marker of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment.                                                                                                                                              of enzymes located in the endoplasmic reticulum primarily in the liver. Cytochrome P450 (CYP) is involved in the major route of phase I drug metabolism. The polymorphism of these enzymes results in the appearance of different phenotypes with differential capacities to metabolise drugs. The method allows for the detection of a mutation in a CYP nucleotide sequence, where the mutation is known to affect the isoform's ability to metabolise a drug. The method is useful for measuring a patient's ability to metabolise a drug, specifically drugs which are metabolised by cytochrome P450 such as omeprazole, pentaprazole, phenytoin, verapamil, propanolol, tolbutamide, S-warfarin, tricyclic antidepressants such as imipramin and anti-malarial prodrugs such as proguanil
                                                                                                                                                                                                                                                                                                                    This sequence represents a PCR primer which used in the sequencing of the DNA encoding cytochrome P450. The PCR product is used in a method for determining the ability of cells to metabolise a drug. The method comprises using a detection primer complementary to a sequence 5' in relation to a point mutation of single-stranded DNA encoding a cytochrome P450 isoform, and detecting the hybridisation. Cytochrome P450 is a group
                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page 21; 28pp; English.

                                                                                                                                                                                                      invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the pharmaceutical agents acting on a disease as well as other treatment. N.B. The SEQ ID NOs 2852, 2913, 2974, 3035, 3096, 3157, 3227, 3297 and 3367, are not actually given a sequence in the Sequence Listing from the

This sequence represents a PCR primer for the KanMx4 gene. The invention relates to a method for the production of ethanol by growing respiration-deficient yeast (A) in which at least one nuclear gene (I), or its product, required for respiration is non-functional and/or inhibited. The method is specifically used to produce fuel alcohol, but may also be used to produce beverages. (A) are less sensitive to the Pasteur effect (reduction in ethanol yield in presence of oxygen) than normal strains but have comparable ethanol tolerance (betters than that of strains with non-functional mitochondrial genes). They thus provide more rapid production of ethanol and higher yields than known respiration-defective
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents a PCR primer for the KanMx4 gene. The invention relates to a method for the production of ethanol by growing respiration-deficient yeast (A) in which at least one nuclear gene (I), or its product, required for respiration is non-functional and/or inhibited. The method is specifically used to produce fuel alcohol, but may also be used to produce beverages. (A) are less sensitive to the Pasteur effect (reduction in ethanol yield in presence of oxygen) than normal strains but have comparable ethanol tolerance (better than that of strains suth non-functional mitochondrial genes). They thus provide more rapid production of ethanol and higher yields than known respiration-defective strains, and they can not metabolise ethanol as a secondary source of carbon, allowing higher final ethanol concentrations to be reached and eliminating the need for a rapid arrest of cell culture. Also maintenance of strictly anaerobic conditions is not necessary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       04-SEP-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                     This invention describes a novel method for obtaining a set of biallelic markers represented in AAXS2533.X52632 and AAXS2833.X52843 for use in constructing a high density equilibrium map of the human genome. The method involves (a) obtaining a nucleic acid library comprising genomic DNA fragments comprising the full genome or a portion (b) determining the corder of genomic DNA fragments in the genomic DNA fragments and (d) sequence of selected regions of the genomic DNA fragments and (d) identifying nucleotides in the genomic DNA fragments and (d) identifying nucleotides in the genomic DNA fragments and (d) individuals, thereby defining a set of biallelic markers. The methods can be used for identifying traits such as disease (e.g. Alzheimer's disease), drug response, drug efficacy and drug toxicity. They can be used for selecting an individual for inclusion in a clinical trial. The method is used to map the position of genes in a genome (preferably the human genome). The sequences described in AAXS2633.X52832 and AAXS2844-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               strains, and they can not metabolise ethanol as a secondary source of carbon, allowing higher final ethanol concentrations to be reached and eliminating the need for a rapid arrest of cell culture. Also maintenance of strictly anaerobic conditions is not necessary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Production of biallelic markers - by obtaining a genomic DNA library determining the order and sequence of DNA fragments and identifying nucleotides which vary between individuals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               drug toxicity; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Biallelic marker; human; high density disequilibrium map; disease; identification; Alzheimer's disease; drug response; drug efficacy;

                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                          CC The recombinant expression plasmid vector comprises a promoter and concerning a signal peptide, an amino-terminal portion of an endogenous secreted Aspergillus polypeptide, an apprided linker which comprises a fungal peptidase cleavage site and a lactoferrin (LF) or LF CC polypeptide fragment operably linked 5' to 3', where the vector permits CC the expression of a LF or its fragment as a fusion protein and the ccluster recombinant production as a processed protein. The vectors can be used for the recombinant production of large amounts of LF in Aspergillus host colls. The human gene can be transferred to mammalian systems such as cows and other agriculturally important animals and expressed in milk. Cf the incorporation of a LF gene and expression in the milk of animals can combat an iron deficiency typical in piglets. The inclusion of a LF gene can be used in piglets. The inclusion of a LF gene combinant LF can be used in a variety of product and would provide a production device for the secreted protein for therapeutic use. The cc fithe expressed gene to young feeding on the milk and would provide a crecembinant LF can be used in a variety of products including human or cc animal foods, as therapeutic additives to enhance iron transport and call toothpaste. The bactericidal LF polypeptides are useful as iron or other metal ion carrier proceins for cutritional and therapeutic uses, and as bacteriostats and bacteriotides. Can be producted in any strain of Aspergillus free from contaminants of LF collated from milk e.g. lactoperoxidase and lysozyme. The present con milk e.g. lactoperoxidase and lysozyme. The present con mutated from milk e.g. lactoperoxidase and hlf start site by in vitro contaminants of LF collated from milk e.g. lactoperoxidase and hlf start site by in vitro contaminants of LF collated from milk e.g. lactoperoxidase and hlf start site by in vitro
                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a method of detecting RNA by polymerase chain reaction (PCR) using synthesis of RNA complementary cDNA and the resultant cDNA as a template, in which the synthesis of cDNA and PCR are successively carried out in one reaction vessel in the presence of a competitor of RNA or CDNA. The method results in the a highly sensitive, simple and rapid determination of RNA without fear of error in pipetting or contamination. AAX23927-X23961 are PCR primers used in the method of .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        primers 1 and 2 (AAV32917) were used in a PCR reaction to amplify the the 3' end sequence of the Aspergillus niger beta-galactosidase genomic DNA. The PCR product was used in the method of the invention. The invention provides a synthetic beta-galactosidase which differs from the natural occurring enzyme in being inactive in milk but capable of being activated by a chemical or condition naturally present in the gasrointestinal tract of humans. The design of this synthetic enzyme comprises of a tail domain fused to the beta-galactosidase through a cleavage site. The presence of the tail domain renders the enzyme inactive and it can also be used as a purification handle. The synthetic beta-galactosidase is claimed to be able to hydrolyse lactose in vivo to overcome lactage intolerance and the contraction of the contracti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           thereby reduce associated gastrointestinal disorders. The synthetic galactosidase is also claimed to be useful in cheese making whereby activated by chymosin when added to milk
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAV21601
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Synthetic beta-galactosidase inactive in milk but active in vivo - can be chemically activated and used to treat lactose intolerance, also useful

CC protein other than a Drosophila melanogaster patched protein, or fragment CC of at least 12 nucleotides in length, as other than an intact chromosome CC under transcriptional termination region, both functional in an expression CC assette as an extrachromosomal element or integrated into the genome of the cell can be predisposed to develop basal cell carcinoma as a result CC protein, a genetic predisposed to develop basal cell carcinoma as a result CC protein, a genetic predisposed to developmental abnormalities and CC cancer can be diagnosed. This analysis can also be used for CC characterising the phenotype of a tumour, particularly a carcinoma, cc especially a basal cell carcinoma. The methods can also be used for CC characterising transitional cell carcinoma of the bladder, meningiomas CC characterising transitional cell carcinoma of the bladder, meningiomas CC characterising transitional cell carcinoma of the bladder, meningiomas CC cassette can be used to determine the role of different exons of the patched gene in oncogenesis, signal transduction, etc. Transgenic animal cc carcinomas of the skin. The patched protein of human or mouse can be used to identify ligands or substrates that bind to, modulate, or commic the action of patched gene. These agents could be used as tumour and acetion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gene. This is used for determining the intronic boundaries of the various exons of human ptc. The invention provides a method for the construction of an expression caracter.

                                                                                                                                                                                                                 for polynucleotides encoding DNA polymerases from Kaposi's sarcoma herper virus (KSHV). The oligonucleotide may be used for detecting viral DNA or RNA in a sample of primate origin, especially in the diagnosis of herpes viral infection. Herpes virus DNA polymerases of this invention, may be used in vaccines for the protection against infection by a herpes virus of the RFHV/KSHV family. They may also be used in the design and screening of anti-viral drugs. Antibodies raised against the polymerase or fragments of it, may be used in the detection of herpes virus

                                                  Aspergillus in cheese making
                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to novel oligonucleotide PCR primers which may used to identify markers associated with genetic diseases and traits i dogs, in particular to disgnose genetic diseases that are not phenotypically visible and to identify carriers of recessive diseases. specific application is diagnosis of copper toxicosis (CT). The invent can also be used to create a genetic map of the canine genome; to generate breed-specific profiles; to establish paternity and to identi dogs from DNA fingerprints. The method provides rapid analysis of the target sequences from only a small sample of DNA. Diagnosis can be don at any time in the dog's life. The present sequence is that of a PCR primer of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          genetic disease; genetic trait; dog; carrier of recessive disease; copper toxicosis; CT; canine genome map; breed-specific profile; DNA fingerprint; dog identification; PCR; primer; 88.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Target DNA corresponding to the MOMP gene of C.trachomatis is detected using one or both of the capture probes AAQ20630 and AAQ20631 fixed passively to a solid hydrophoic support together with one or both of detection probe(s) AAQ20632 and AAQ20633 labelled with a non-radioactive marker. The capture and detection probes are able to hybridise to non-overlapping segments of the target sequence. See also AAQ20389-Q20420 and
The probe is one of a set of nine probes having a sequence complementary to the upstream and downstream conserved region of a region encoding four Chlamydia variable surface proteins. The probes are used as primers to amplify Chlamydia DNA contg. a serotype specific base sequence, by PCR, and then used to identify positive PCR prods. The method allows accurate diagnosis of microorganisms of the Chlamydia genus. See also AAQ33000-7. (Updated on 10-MAR-2003 to add missing OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cros
                                                                                                                                                                                                                                                                                 Chlamydia sp. Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
                                     The present sequence represents a sequence tagged site (STS) primer used con the isolation of cosmids from the DPC4 (deleted in pancreatic cancer, colors 4) region, and gene identification. DPC4 is a tumour suppressor contragenic mutations in the nucleic acid encoding it, is used to diagnose contragenic mutations in the nucleic acid encoding it, is used to diagnose contragenic mutations in the nucleic acid encoding it, is used to diagnose contragenic mutations in the nucleic acid encoding it, is used to diagnose contragenic mutations in the nucleic acid encoding it, is used to diagnose contragenic mutations in the nucleic acid encoding it, is used to diagnose continuous problem of the sequence cancer. Crohn's disease, conditions, where associated with a homozygous deletion, can be treated by administering an agent that: (a) modulates DPC4 expression, conditions, where associated with a homozygous deletion, can be treated by administering an agent that: (a) modulates DPC4 expression, contain sourcessed or (b) mimics the activity of DPC4. DPC4 nucleic acid contains also used as hybridisation probes for detecting presence/absence of the detected in this region, an agent can be administered that accumulates contains the absence of an enzyme (or other protein) encoded by a consighbouring gene and lost by the deletion, i.e. it has a highly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Local Similarity Matches 16; Conserv

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       with brain, peripheral nerves, owary and intestines and has closest homology with the myosin family proteins MYHO, MYHO and MHC11. The product of the invention is used to identify mutations and alteration in nucleic acids, by hybridisation. Computer-based comparison of the human chromosomal 19q region with the rat sequence AF139055 (encoding a non-muscle myosin heavy chain B) indicated a potential human homologue. A set of exonic primers was designed and used to amplify cDNA derived from mRNA isolated from the sciatic nerve. The 13 amplicons were sequenced and assembled to form an approximately 6kb sequence that included an open reading frame for MYH14, but lacked the polyadenylation signal. The corresponding gene contains 40 exons (about 100 kb), entirely present within the bacterial artificial chromosomes AC020906, AC010515 and AC0106555. The MYH14 protein corresponds to the hypothetical protein FLJ 1881 This segmenter remembers a DCD primer used to amplify the human human account of the segmenter and the segmenter than the segmenter and the segmenter than the human account of the hypothetical protein FLJ 1881 This segmenter remembers a DCD primer used to amplify the human 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         death-associated protein kinase-rel. apoptosis-inducing protein kinase; serine/threonine kinase 17B; STK17B; apoptosis; degenerative disorder; neurological disorder; Alzheimer's disease; sissinson's disease; Amylotrophic lateral sclerosis; ALS; retinitis pigmentosa; blood cell disorder; cancer; autoimmune disorder; viral infection; gene therapy; hyperproliferative disorder; chromosome 2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a new compound (e.g. an antisense CC oligonucleotide), having a sequence comprising 8-80 bp targeted to a nucleic acid encoding DRAKZ (death-associated protein kinase-related expoptosis-inducing protein kinase 2, also known as serine/threonine CC kinase 17B, STK17B), specifically hybridises with the nucleic acid encoding DRAKZ (appearing as Aprileose) and representing bases 58695-149492 (c) finamen chromosome 2) and inhibits expression of DRAKZ. Also included are inhibiting the expression of DRAKZ in cells or tissues, screening for a modulator of DRAKZ, a diagnostic method for identifying a disease cstate, a kit or assay device comprising the compound and treating an animal having a disease or condition associated with DRAKZ. The cligonucleotide compound is useful for preparing a composition for creating hyperproliferative disorders, degenerative disorders, cancer, autoimmune disorders, Parkinson's disease, CC Amylotrophic lateral sclerosis (ALS), retinitis pigmentosa, blood cell disorders, cancer, autoimmune disorders and viral infection. The invention is useful for preparing a composition for treating hyperproliferative disorder such as cancer. I invention acts as a cytostatic agent. The invention is also useful in gene therapy. The present sequence is human sentrin-2 target oligonucleotide. This sequence is used in the exemplification of the

encoding the human Angiopoietin-2 polypeptide. The compound is an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits expression of the polypeptide. The antisense oligonucleotide comprises at least one modified internucleoside linkage i.e. a phosphorothioate linkage, at least one modified sugar moiety, preferably a 2'-O-methoxyethyl sugar moiety, or at least one modified nucleobase comprising a 5-methylcytosine. The antisense compounds are useful for modulating the expression of the human Angiopoietin-2 useful for modulating the expression of the human Angiopoietin-2
Sequence
                                                                               polypeptide and in preparation of a composition for treating hyperproliferative disorders, e.g. cancer. This sequence represents antisense oligonuclectide targeted to DNA encoding a human Angiopoie polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   disorder, e.g., cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New oligonucleotide compound that inhibits expression of Angiopoietin-2, useful for preparing a composition for treating hyperproliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 11-DEC-2002; 2002US-00317803
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                11-DEC-2002; 2002US-00317803
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a compound targeted to a nucleic acid molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 15; SEQ ID NO 86; 102pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2004-449380/42
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US2004115640-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (ISIS-) ISIS PHARM INC

ADO48104
                                                                                                                                                                                                      The invention relates to a compound targeted to a nucleic acid molecule encoding Huntingtin interacting protein i (HIP-1) protein interactor. The compound is useful for treating an animal having a disease or condition associated with HIP-1 protein interactor, such as dysregulation of apoptosis. The compound may also be used for diagnostics, therapeutics, prophylaxis and as research agents and kits, or to elucidate the function of particular genes or to distinguish between functions of various members of a biological pathway. The present sequence represents a human HIP-1 antisense oligonucleotide target sequence.
                                                                                                                                                                                                                                                                                                                             New compounds targeted to a nucleic acid molecule encoding HIP-1 protein interactor, useful for treating an animal having a disease or condition associated with HIP-1 protein interactor, such as dysregulation of

The present invention is directed to antisense oligonucleotides targeted to sentrin-2 (also known as SMT3H2, SMT3A and SUMO-3) and which modulate the expression of sentrin-2. The invention is useful for preparing a composition for treating hyperproliferative disorder such as cancer. The invention acts as a cytostatic agent. The invention is also useful in gene therapy. The present sequence is human sentrin-2 antisense oligonucleotide. This sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         useful for preparing a composition for treating disorder, e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New oligonucleotide compound that inhibits expression of sentrin-2, useful for preparing a composition for treating hyperproliferative

                                            New compounds targeted to a nucleic acid molecule encoding HIP-1 interactor, useful for treating an animal having a disease or coassociated with HIP-1 protein interactor, such as dysregulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a compound targeted to a nucleic acid molecule encoding Huntingtin interacting protein i (HIP-1) protein interactor. The compound is useful for treating an animal having a disease or condition associated with HIP-1 protein interactor, such as dysregulation of apoptosis. The compound may also be used for diagnostics, therapeutics, prophylaxis and as research agents and kits, or to elucidate the function of particular genes or to distinguish between functions of various members of a biological pathway. The present sequence represents a human HIP-1 antisense oligonucleotide.
                                  apoptosis.

The compound is useful for treating an animal having a disease or condition associated with HIP-1 protein interactor, such as dysregulation of apoptosis. The compound may also be used for diagnostics, therapeutics, prophylaxis and as research agents and kits, or to elucidate the function of particular genes or to distinguish between functions of various members of a biological pathway. The present sequence represents a human HIP-1 antisense oligonucleotide target sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to antisense oligonucleotides targeted to a nucleic acid molecule encoding Glucose transporter-4. The oligonucleotides specifically hybridise with the nucleic acid molecule encoding Glucose transporter-4 and inhibit the expression of Glucose transporter-4. The antisense oligonucleotide is useful for inhibiting the expression of Glucose transporter-4 in cells or tissues to prevent or treat diseases associated with their expression, such as a hyperproliferative disorder. In addition, the compound is used for diagnostics, prophylaxis, or as research reagents or kits. The present sequence represents a human glucose transporter-4 antisense oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                   cytostatic; antisense therapy; cytokine-inducible kinase; cytokine-inducible kinase inhibitor; antisense technology; cytokine-inducible kinase expression; hyperproliferative disorder; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antisense oligonucleotides for modulating Glucose transporter-4 expression, useful for diagnosing, preventing or treating conditions associated with the transporter's expression e.g. hyperproliferative

CC Cytokine-inducible kinase; a diagnostic method for identifying a disease cc state, comprising identifying the presence of Cytokine-inducible kinase in a diagnostic method for identifying a disease cc in a sample using at least one of the primers or probe comprising the motioned in the specification; a kit or assay conclectide sequences as mentioned in the specification; a kit or assay conclecting a disease or condition associated with Cytokine-inducible kinase, cc comprising administering to the animal a therapeutic or prophylactic cambunt of the compound so that expression of Cytokine-inducible kinase is chihibited. The antisense oligonuclectide is useful for inhibiting the corporative disease associated with the kinase expression, such as typerproliferative disorders. In addition, the compound is used for cdiagnostics, prophylaxis, or as research reagents or kits. This sequence crepresents a human cytokine-inducible kinase antisense oligonuclectide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes a compound 8-80 nucleobases in length targeted to a nucleic acid molecule encoding Cytokine-inducible kinase. The compound specifically hybridises with the nucleic acid molecule encoding Cytokine-inducible kinase (which comprises a sequence of 2169 bp fully defined in the specification) and inhibits the expression of Cytokine-inducible kinase. Also described are: a method of inhibiting the expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cytokine-inducible kinase, comprising contacting a preferred target segment of the nucleic acid encoding Cytokine-inducible kinase with one or more candidate modulators of Cytokine-inducible kinase, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense oligonucleotides useful for modulating Cytokine-inducible kinase expression, useful for diagnosing, preventing or treating conditions associated with aberrant kinase expression e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cytokine-inducible kinase in cells or tissues, comprising contacting the cells or tissues with the new compound so that the expression of Cytokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 15; SEQ ID NO 86; 56pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  hyperproliferative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2004-399685/37.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ward DT, Dobie
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (ISIS-) ISIS PHARM INC

                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 1558
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of primer 307CA2R which, with primer 307CA2F CC ADO43251, can be used to amplify 307CA2, a novel microsatellite marker CC associated with bipolar affective disorder and genetically related CC unipolar affective disorder: 307CA2 comprises a dinucleotide repeat. 11 CC Alleles (122-166 bp) have been detected. A locus for bipolar disorder and CC related unipolar affective disorders has been fine mapped on chromosome CC 1c(12) for the first time and several genes that are carrying mutations CC region is approximately 2 million base pairs of DNA in the chromosomal CC region 12q24.3 on the short arm of chromosome 12 between markers D12S2705 CC and D12S340. The inventors genotyped 21 newly described and previously published microsatellite markers in a sample of 381 Danish and British CC bipolar patients and compared the frequency of marker alleles to a compared the frequencies, which were highly statistically significant, were found for 10 of these markers. CC highly statistically significant, were found for 10 of these markers. CC Based on the results, the invention provides markers and methods of using CC them in diagnosing, or determining the susceptibility of an individual compounds for use as part of therapeutic and/or diagnostic methods. A method of treatment comprises administering a substance that modulates constitute gene or which modulates that modulates constitute gene or which modulates that modulates

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to antisense oligonucleotides targeted to a nucleic acid molecule encoding Glucose transporter-4. The oligonucleotides specifically hybridise with the nucleic acid molecule encoding Glucose transporter-4 and inhibit the expression of Glucose transporter-4. The antisense oligonucleotide is useful for inhibiting the expression of Glucose transporter-4 in cells or tissues to prevent or treat diseases associated with their expression, such as a hyperproliferative disorder. In addition, the compound is used for diagnostics, prophylaxis, or as research reagents or kits. The present sequence represents a human glucose transporter-4 antisense oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense oligonucleotides for modulating Glucose transporter-4 expression, useful for diagnosing, preventing or treating conditions associated with the transporter's expression e.g. hyperproliferative

                                                                                                                                                                                                                                                                                  The invention relates to compounds, compositions and methods for modulating the expression of mitogen-activated protein kinase kinase kinase kinase 1 (also called MAPSK11, mixed-lineage protein kinase 3, MK-3, SH3-containing proline-rich protein kinase, SPRK). The composition comprise antisense oligonuclectides targeted to MAP3K11. The compound and the methods are useful in treating an animal having a disease or condition involving dysregulation of cellular apoptosis. The invention is also useful in gene therapy. The present sequence is an antisense oligonuclectide targeted to human MAP3K11 DNA. This sequence is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                             New compound that modulates mitogen-activated protein kinase kinase kinase 11 expression, useful in treating an animal having a disease condition involving dysregulation of cellular apoptosis.

                                                                                                                                                                                                                                    comprise antisense oligonucleotides targeted to MAP3K11. The compound and the methods are useful in treating an animal having a disease or condition involving dysregulation of cellular apoptosis. The invention is also useful in gene therapy. The present sequence is human MAP3K11 DNA target site. This sequence is used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                              modulating the expression of mitogen-activated protein kinase k kinase 11 (also called MAP3K11, mixed-lineage protein kinase 3, SH3-containing proline-rich protein kinase, SPRK). The composit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New compound that modulates mitogen-activated protein kinase kinase kinase 11 expression, useful in treating an animal having a disease condition involving dysregulation of cellular apoptosis.
                                                                                                                                                                       Sequence 20

The invention describes a method of identifying a compound that induces comescence in a mammalian cell. The method comprises: culturing the mammalian cell in the presence and absence of the compound; assaying expression of at least one cellular gene selected from 73 genes given in the specification, in the cell in the presence and in the absence of the compound; and identifying compounds that induce senescence when expression of at least one of the cellular gene is higher in the presence of the compound than in the absence of the compound. Also described are: a compound that induces senescence with a method above; assessing efficacy of a treatment of a disease or the method above; assessing efficacy of a treatment of a disease or condition relating to abnormal cell proliferation or neoplastic cell growth; and identifying a compound that inhibits senescence-associated induction of cellular gene expression. Compounds that induce senescence in abnormally proliferating or neoplastic cells are useful for treating a complastic cell growth. This sequence represents a reverse transcriptase or condition relating to abnormal cell proliferation or neoplastic cells are used to identify genes induced and reverse franscriptase for primer used to identify genes induced and repressed follwing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cytostatic; senescence; cell proliferation; neoplastic cell growth; cellular gene expression; reverse transcriptase PCR; RT-PCR; primer; doxorubicin-induced sensescence; HCT 116 cell; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying a compound that induces senescence in a mammalian cell, useful for treating abnormal cell proliferation, comprises assaying expression of a cellular gene in the cell in the presence and in that absence of a compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 21-DEC-2000; 2000US-0257907P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC codon, coding region, 5' or 3' intron-exon junction, intron or region CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target CC chosen from a gene encoding interleukin (II)-4 receptor, interleukin (II)-5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention CC also relates to a method of screening a candidate compound that binds to one or more nucleic acid target(s) or expressed product(s), for the CC prevention and/or treatment of a respiratory or lung disease. The CC one or mRNA encoding interleukin-4 receptor, interleukin-5 receptor, CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are CC useful for preventing or treating a respiratory or lung disease. The CC useful for preventing or treating a respiratory or lung disease. The CC useful for preventing or treating a respiratory or lung disease. The CC inflammation or an inflammatory disease. The respiratory or lung disease is associated with hyper-responsiveness to CC and/or increased levels of, adenosine and/or lung allergies associated with CC inflammation or an inflammatory disease. The respiratory or lung disease is chosen from airway inflammation, allergy, asthma, impeded respiration, CC cystic fibrosis (CP), chronic obstructive pulmonary disease (COPD), allergic rhinfils. Calter respiratory disease syndrome bulmonary

CC relates to a method for analysing a blomolecule in a biological sample, CC comprising altering SAC1 activity in the sample and measuring the CC activity, a method for analysing a polynucleotide in a biological sample, CC comprising contacting a polynucleotide in a biological sample, CC comprising contacting a polynucleotide in a biological sample with a CC probe where the probe hybridises to a SAC1 polynucleotide to form a CC probe where the probe hybridises to a SAC1 polynucleotide to form a CC probe where the probe hybridises to a SAC1 polynucleotide to form a CC probe where the probe hybridises comprising comparing the nucleotide sequence of the suspected SAC1 allele with a wild type CC and the wild-type sequence identifies a sequence variation of the SAC1 nucleotide sequence, and a method of treating or preventing obesity, CC diabetes or alcoholism associated with expression of SAC1, comprising CC administering to a subject a pharmaceutical composition and a transgenic administering to a subject a pharmaceutical composition and a transgenic cCC invention are useful for screening drugs for inhibition or CC consumption therapies and for identifying sweeteners and alcohols. This sequence represents a PCR primer used to amplify murine SAC1 DNA of the

The CC oligonucleotides are useful for reducing or inhibiting expression of a CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor, CC CCR1, CCR3, Ectaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, CCR1, CCR3, Ectaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a receptor control or long disease and control or long disease. The creeful for preventing or treating a respiratory or lung disease. The creeful for preventing or treating a respiratory or lung disease to cond/or increased levels of, adenosine and/or levels of adenosine A creceptor(s), and/or asthma and/or lung allergies associated with confinemation or an inflammatory disease. The respiratory or lung disease inflammation or an inflammatory disease. The respiratory or lung disease consistence of the constant of the constant control of the creation, lung inflammation, bronchitis, airway obstruction or convention. This sequence represents an oligonucleotide of the creation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

Cc chosen from a gene encoding interleukin (II)-4 receptor, interleukin (II)-CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, CC tryptase a, tryptase b, PDE4 A, PDE4 B, DDE4 C or PDE4 D. The invention CC also relates to a method of screening a candidate compound that binds to CC one or more nucleic acid target(s) or expressed product(s), for the CC prevention and/or treatment of a respiratory or lung disease. The CC oligonucleotides are useful for reducing or inhibiting expression of a CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor, CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, CC tryptase b, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are CC useful for preventing or treating a respiratory or lung disease. The CC respiratory or lung disease is associated with hyper-responsiveness to CC and/or increased levels of, adenosine and/or levels of adenosine A CC receptor(s), and/or asthma and/or disease. The respiratory or lung disease is chosen from airway inflammation, allergy, asthma, impeded respiration, CC systic fibrosis (CF), chronic obstructive pulmonary disease (COPD), CC allergic rhinitis, acute respiratory distress syndrome, pulmonary. CC invention. This sequence represents an oligonucleotide of the convention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to oligonucleotides anti-sense to an initiation codon, coding region, 5' or 3' intron-exon junction, intron or region with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel single or multiple target oligonucleotide anti-sense to e.g. initiation codon, intron of respiratory disease-relevant gene e.g. CCR1, RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SEQ ID NO 2447; 174pp; English

```
The invention relates to oligonucleotides anti-sense to an initiation CC codon, coding region, 5' or 3' intron-exon junction, intron or region CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)-5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention CC also relates to a method of screening a candidate compound that binds to come or more nucleic acid target(s) or expressed product(s), for the compound to the compound that binds to come or more nucleic acid target(s) or expressed product(s), for the coligonucleotides are useful for reducing or inhibiting expression of a come or mana encoding interleukin-4 receptor, interleukin-5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are useful for preventing or treating a respiratory or lung disease. The ceptor(s), and/or asthma and/or lung allergies associated with hyper-responsiveness to compliance of increased levels of, adenosine and/or lung allergies associated with composity or lung disease. The respiratory or lung disease is chosen from airway inflammation, allergy, asthma, impeded respiration, cystic fibrosis (CP), chronic obstructive pulmonary disease (COPD), callergic rhinitis, acute respiratory distress syndrome, pulmonary of the composition of the composit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; BS; interleukin-4 receptor; IL-4; interleukin-5 receptor; IL-5 (CCR1; CCR3; Eotaxin-1; RANTES; MCP4; CD23; ICAM; VCRM; tryptase a; tryptase b; PDE4 A; PDE4 B; PDE4 C; PDE4 D; respiratory disease; lung disease; hyper-responsiveness; adenosine; adenosine A receptor; asthma; lung allergy; inflammation; inflammatory disease; airway inflammation; allergy; impeded respiration; cystic fibrosis; chronic obstructive pulmonary disease; COPD; allergic rhinitis; acute respiratory distress syndrome; pulmonary hypertension; lung inflammation; bronchitis; airway obstruction; bronchoconstrictic

The invention relates to oligonucleotides anti-sense to an initiation codon, coding region, 5' or 3' intron-exon junction, intron or region with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)-5 receptor, CCR1, CCR3, Ectaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention also relates to a method of screening a candidate compound that binds to one or more nucleic acid target(s) or expressed product(s), for the
                                                                                                                                                                                                                                                                                              Novel single or multiple target oligonucleotide anti-sense to e.g. initiation codon, intron of respiratory disease-relevant gene e.g. CCR1, RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; 88; interleukin-4 receptor; IL-4; interleukin-5 receptor; IL-9 (CRI; CCR3; Eotaxin-1; RANTES; MCP4; CD23; ICAM; CCRM; tryptase a; tryptase b; PDE4 A; PDE4 B; PDE4 C; PDE4 D; respiratory disease; lung disease; hyper-responsiveness; adenosine; adenosine A receptor; asthma; lung allergy; inflammation; inflammatory disease; airway inflammation; allergy; impeded respiration; cystic fibrosis; (chronic obstructive pulmonary disease; COPD; allergic rhinitis; acute respiratory distress syndrome; pulmonary hypertension; lung inflammation; bronchitis; airway obstruction; bronchoconstriction
